General Cable has been a wire and cable innovator for over 170 years, always dedicated to connecting and powering people’s lives. Today, with more than 14,500 employees and $6 billion in revenues, we are one of the largest wire and cable manufacturers in the world.

Our company serves customers through a global network of 57 manufacturing facilities in 26 countries and has worldwide sales representation and distribution. We are dedicated to the production of high-quality aluminum, copper and fiber optic wire and cable and systems solutions for the energy, construction, industrial, specialty and communications sectors. With a vast portfolio of products to meet thousands of diverse application requirements, we continue to invest in research and development in order to maintain and extend our technology leadership by developing new materials, designing new products, and creating new solutions to meet tomorrow’s market challenges.

In addition to our strong brand recognition and strengths in technology and manufacturing, General Cable is also competitive in such areas as distribution and logistics, marketing, sales and customer service. This combination enables us to better serve our customers globally and as they expand into new geographic markets.

General Cable offers our customers all the strengths and value of a large company, but our people give us the agility and responsiveness of a small one. We service you globally or locally.

GLOBAL RESOURCES, WORLD-CLASS SERVICE

Successful globalization of the oil, gas and petrochemical industry requires global leaders with the knowledge, experience and engineering expertise to meet international product requirements. With a legacy of innovation that spans more than 170 years, General Cable is uniquely positioned to develop state-of-the-art cable solutions for today’s upstream, midstream and downstream application challenges—from topside, subsea and onshore to refineries and petrochemical plants.

Uniquely positioned to respond to the evolving needs of the global oil and gas market, General Cable has the resources, production processes and dedication to work side-by-side with customers to design cost-effective solutions that meet exact specifications while providing value-added services. Backed by an organization that is flexible and responsive with a commitment to maintaining lasting customer relationships, customers can count on General Cable for dedicated service and technical support.

GLOBAL INVESTMENT, WORLDWIDE SUPPLY

Through dedicated engineering expertise and effective management of global resources and capabilities, General Cable continues to invest in advanced onshore and offshore cable designs while providing value-added assemblies and services for the global oil, gas and petrochemical industry.

Global demand for oil, gas and petroleum-based byproducts has reached record levels. No longer can the industry take a regional or local approach. Through our expansive global footprint, General Cable has the capability to manufacture and deliver a diversified worldwide supply of cable solutions for long-term reliable performance under the most severe conditions across the globe.

- Worldwide engineering and technology resources
- Global industry teams and distribution network
- Universal vertical integration capabilities
- Strong global supply chain and inventory support
- Dedicated global service, support and sales expertise

QUALITY ASSURANCE GUARANTEED

Through ongoing quality assurance initiatives, General Cable ensures the quality of product design, manufacture, installation and expected service life, as well as respect for the environment through sustainable products, processes and policies. Continuous research and development combined with process control, quality audits and stringent testing provide an ever-growing range of specialty materials and designs that meet the approvals and standards of the oil, gas and petrochemical industry. General Cable is ISO 9001:2008 certified for quality and has ISO 14001-equivalent management systems for environmental responsibility.

Industry Approvals & Certifications

- ABS American Bureau of Shipping
- CCG Canadian Coast Guard
- CSA Canadian Standards Association
- DNV Det Norske Veritas
- ITS Intertek Testing Service
- ISO 9001 International Organization for Standards
- ISO 14001 International Organization for Standards
- LRS Lloyds Register of Shipping
- UL Underwriters Laboratories
- USCG United States Coast Guard
- Various Shipyard, Oil Rig and Petrochemical Facilities

Industry Standards

- API American Petroleum Institute
- BSI British Standards Institute
- CSA Canadian Standards Association
- ICEA Insulated Cable Engineers Association
- IEEE Institute of Electrical & Electronic Engineers
- IEC International Electrotechnical Commission
- NEK TS 606 Norwegian Elektrotechnical Standard
- UL Underwriters Laboratories

## Offshore Topside Applications

Through our long-term commitment and investment in the global oil, gas and petrochemical industry, General Cable’s specialized team of expert engineers has developed innovative, effective cable designs that help protect lives and preserve the operational integrity of mission-critical equipment in the most demanding offshore exploration and production environments around the world.

To meet increasing power requirements, global offshore rigs, production platforms, FPSOs and ships rely on General Cable’s comprehensive range of industry-leading, application-specific cables for stabilization and directional drilling.

* SectorFlex® conductor on 35mm² and larger for reduced weight and overall cable dimensions. Compliant with performance requirements of IEEE 1580.
As offshore oil exploration continues to expand to deeper waters around the globe, General Cable’s commitment to continuous R&D provides an ever-growing range of NSW® Brand submarine cables and umbilicals that perform under the harshest electrical and mechanical stresses to ensure ongoing, reliable operation in severe environments below the sea.

Everything from underwater platforms, pipelines and long-haul communications to ROVs, winches, ploughs and trenchers relies on General Cable’s subsea cable solutions. Through our enhanced capabilities, we supply combinations of fiber optics, low-, medium-, and high-voltage applications up to 150 kV AC, fully qualified splicing technology, sophisticated extrusion lines and maximum armoring capacity to armor 138 wires in one layer. Our medium-voltage submarine solutions for power distribution also include factory and offshore splice and repair.

General Cable’s processing capabilities and decades of experience deliver subsea cables that meet stringent industry specifications and the specialized power, control and communications requirements of vital seabed infrastructures.
From Alaska’s North Slope to the deserts of the Middle East, today’s competitive onshore environment with deeper drilling for resources in extreme, remote locations around the globe requires advanced cable designs that meet industry specifications while ensuring the utmost performance for these challenging applications.

From a variety of IEEE Type P mud oil-resistant constructions and continuously corrugated welded armor low- and medium-voltage cables designed for hazardous installations to cables engineered for maximum longevity in the most severe electrical submersible pump (ESP) applications, today’s land drilling rigs rely on General Cable’s onshore cable solutions. At the same time, our wide range of low-voltage cables maintains standards-compliant performance and data transmission integrity for ongoing operation of modern automation, instrumentation, control and communications systems.

General Cable’s full platform of robust, low-maintenance and high-functioning cable designs meets the challenges of onshore oil and gas exploration and production well into the future.

Today’s liquefied natural gas (LNG) and refining systems are more complex than ever, and space is at a premium. As safety remains the number one priority, followed closely by uptime and productivity, General Cable continues to diversify its product offering by investing in precision-engineered, state-of-the-art equipment to produce a full line of specialized cables for midstream and downstream applications.

From resistance to oils, hydrocarbons and chemicals to continuing performance in sub-zero or extreme high temperatures, General Cable is committed to providing quality high-performing cables backed by expert technical support. Offered in a variety of armor types such as wire, metal clad and continuous corrugated weld, our tested and proven line of industrial-grade low-, medium-, and high-voltage power cables and control, instrumentation and signal cables comprises an extensive selection of application-specific compounds and is in compliance with applicable IEC/EN and/or IEEE/UL standards.

General Cable’s midstream and downstream cables help maintain the operational integrity of global LNG facilities, refineries and petrochemical plants to ensure efficiency and performance.
General Cable, a leading wire and cable innovator for over 170 years, serves customers through a global network of 57 manufacturing facilities in 26 countries and has worldwide sales representation and distribution. The Company is dedicated to the production of high-quality aluminum, copper and fiber optic wire and cable and systems solutions for the energy, construction, industrial, specialty and communications sectors. In addition to our strong brand recognition and strengths in technology and manufacturing, General Cable is also competitive in such areas as distribution and logistics, marketing, sales and customer service. This combination enables General Cable to better serve its customers as they expand into new geographic markets.
